DACHubs are projects or clusters of projects built in close proximity to one another with capacity to remove a million metric tons of CO₂ or more per year. OCEDs DACHubs Program will develop four domestic direct air capture hubs.

Each will demonstrate a DAC technology or suite of technologies at a commercial scale with the potential for capturing at least 1 million metric tons of CO₂ annually from the atmosphere. DocHub is packed with everything you need to easily edit and annotate PDFs from desktop or mobile.

Features like real time sync roles and permissions help you collaborate effectively from anywhere.

Build fillable PDF forms and make them public to instantly start collecting data. In November 2021 President Biden signed the Infrastructure Investment and Jobs Act IIJA which set aside \$3.5 billion to create four direct air capture DAC hubs. Technologies that take carbon pollution out of the atmosphere and store it permanently. By December 2023, large scale construction of direct air capture DAC hubs to scrub CO₂ from the atmosphere paired with geological storage is a prominent approach to potentially meet this target decision making processes that directly affect them.

While DACHubs can provide global benefits such as reduced atmospheric CO₂ concentrations and associated impacts of climate repair, it is important to consider how these hubs might be able to contribute to a broader movement of centering the voices and needs of marginalized and low SES. By December 2024, learn how Direct Air Capture hubs are crucial in bridging the scale gap in carbon capture technology, accelerating deployment and combating rising emissions. By January 2025, this collaboration is part of the Pelican Gulf Coast Carbon Removal DACHub project in Louisiana, which aims to evaluate the feasibility of building a large scale direct air capture facility. By January 2023, on December 13, 2022, the United States Department of Energy (DOE) released a Funding Opportunity Announcement (FOA) for the development of four regional Direct Air Capture DAC hubs. By October 15, 2024, in December 2022, OCED issued the first funding opportunity announcement under the Regional DACHubs program, offering up to \$1.2 billion to fund the design, construction, or operation of regional DACHubs.
