Dec 19 2025 Shinymakes it easy for R developers to turn their analyses into interactive web applications that anyone can use without requiring any prior HTML CSS or JavaScript knowledge Jan 13 2017 I want to build ashinyapp that gets matrix data as input and returns a table based on some operations on it as output

By search I find that ShinyTable package could be useful. I tried belowshiny I m trying to makeshinyapps available to my coworkers without them having to run or even have R installed

So I read this webpage and found this sentence If you are familiar with web hosting or By default shinyruns with the option window inside R Studio which without R Studio won t work

Suppose that you have installed the necessary libraries in the path E some_path rlib Not sure if this question is still active but it s the first one that came up when searching for saving plots inshinyapp so I wanted to quickly add how to get ggsave to work with downloadHandler along the lines of the original question

The alternative strategies suggested by juba using direct output instead of ggsave and alternative strategy suggested by alexwhan himself both work great Oct 10 2021 I ve someshinyapp and I want to execute and to make it standalone application it will be awesome if it will open via chrome

I can t upload the app to the Net and I want that also co workers wi Feb 24 2014 I ve been working on ashinyapp and would like to include a logo in the upper right corner of the app

How can I easily embed an image usingshinyand r? Thanks! K Rshiny how to use multiple inputs from selectInput to pass onto select option in dplyr? Asked 9 years 3 months ago Modified 3 years 5 months ago Viewed 43k times I m creating ashinyweb app and would like to set the size of the plot and scale

What I mean by that is I m looking for a way to set a finite height width for my plot and then scale that set sized image to the mainPanel plotOutput area. Take this as an example analogous situation outside ofshiny Nov 4 2015 It s like the difference between observe and reactive

One is intended to be run when some reactive variable is triggered and is meant to have side effects observeEvent and the other returns a reactive value and is meant to be used as a variable eventReactive

Even in the documentation for those functions the former is shown without being assigned to a variable because it is intended.
