Oct 30 2018 ok so the 3 way 2 way x over thing is where the deck uses the 6 pre outs for front rear sub for 2 way and front tweeters front mids sub for 3 way. way is known as active crossovers or more traditionally biamping

Car component speakers come with tweeters mids and a passive crossover when running 3 way aka active x over active network or biamping the deck will separate out the Good evening I d like to upgrade my stereo in a 2011 Toyota Land cruiser Prado 150

I have a factory audio system with the amplifier under the passenger seat. The only requirements are 2xUSB Apple carplay and the ability to connect a reversing camera. The Pioneer SPH Da120 looks as though Jan 14 2019 yes you can run 2 amps

for that matter you can run 10 amps to 5 speakers technically. Or 5 amps to 5 speakers or 3 amps to 5 speakers etc etc etc. Most folks get a decent 4 channel for the fronts and rears and a mono for the sub. some folks get a sturdy 5 channel for all of em

The real answer is very long and very short at the same time Can you run multiple amps? yes should you? probably Jun 19 2017 Hi I have a VW Passat with factory speakers there is a tweeter and a 6.5 speaker installed in each door. Some time ago I replaced the old head unit with a Kenwood KDC BT500U

The sound quality remained about the same as before and a wide range of sounds could be heard. Recently I noticed So Best Buy sold and installed me a Pioneer DEH S6120BS with the Smart Sync app They re phasing out Pioneer Arc I believe

So in my experience Smart Sync seems to have proven pretty stupid

It keeps crashing on my iPhone everytime I click OK at the initial Caution don t use app while Jan 3 2019 Good day everyone I m looking for a way to integrate two 6x9 speakers into the standard sound of a Nissan NP200 and changing out the front speakers to better ones head unit already replaced

I ve been recommended to place them in the holes behind the seats at the sides. Have anyone done Jan 19 2019 Yes the VXi series of amps are definitely worth the price. The DSP is extremely flexible you can link up to 5 amps with the hub and you get a set of tunable outputs

The sound quality is great and the channel configurations are many. You can even assign different channel assignments to different presets selectable using the DRC

I m happy to answer any questions you have on the VXi series Dec 13 2014 so while perusing SSA i stumbled across these PRV Audio 6MR500 and they remind me of the old 90s Focal 6.5s
