Jul 8 2015 Yes it is. It is in the slope intercept form.  $y = 12 + 2x = 2x + 12$   $y = 2x + 12$  is the slope intercept form of a linear equation  $y = mx + b$  For ideal gas on a pV diagram an adiabatic curve is always steeper than an isotherm if they intersect

The ideal gas equation  $pV = nRT$  p is pressure V is volume n is number of moles R is ideal gas constant T is the absolute temperature For an isothermal process the right hand side of the ideal gas equation does not change

Which means  $pV = \text{constant}$  The slope at any point is given by  $\frac{dp}{p}$  Jan 11 2024 globe\_with\_meridians Slope Multiplayer Review Hard but in a good way. Players. game reviews slope

46 8466 August 26 2024 For players to talk about games and other general topics

Mar 10 2016 Explanation  $y = mx + c$  is the equation of a line in slope intercept form

where m represents the gradient slope and c the y intercept Forum for Y8 Games. A place for players to meet and discuss about gaming related topics Explanation Slope intercept form is  $y = mx + b$  where m is the slope and b is the y intercept. Since  $m = \frac{1}{4}$  and  $b = 2$  plug those in to get  $y = \frac{1}{4}x + 2$

The general equation for point slope form is  $y - k = m(x - h)$  where m is the slope and h k is some point on the line Apr 9 2017  $y = \frac{3}{2}x + \frac{27}{2}$   $y = mx + b$  Calculate the slope m from the given point values solve for b by using one of the point values and check your solution using the other point values. A line can be thought of as the ratio of the change between horizontal x and vertical y positions

Thus for any two points defined by Cartesian planar coordinates such as those given in this problem you Explanation the equation of a line in color blue slope intercept form is If a line has the equation  $y = mx + b$  where m and b are constants then m is the slope of the line and b is the y intercept that is the line passes through the point 0 b

Note that the given equation is actually in that form already with  $m = \frac{5}{8}$  and  $b = 0$ .
