Mar 29 2019 Netgear Orbi app speed test inaccurate vs speedtest for AC2200 router helped by CM600 modem I just set up my new CM600 modem a few nights ago because my Orbi 2200 router was being unreliable

I bought the Orbi router has really helped cover my duplex apartment with good reliable WiFi Aug 31 2015 The router modem is hardwired to my computer When I do a speedtest on Netgear Genie to www.netgear.com it says my download speed from this website is 631 Kbps

When I do a speedtest from www.speedtest.net it says my download speed is 88Mbps

Why the marked difference? What is my actual download speed? Nov 25 2018 QOS speed test and speedtest different ok so I purchased and setup the unit today ISP Spectrum 200Mbps new modem this week test on my phone using speedtest app getting 40 50 Mbps only which is hardly any better than the linksys system I replaced Oct 16 2023 In fact the wired PC using speedtest gets a higher speed than using Orbi app to measure the speed from the Fiber modem to Orbi

Is that odd?? I hope I'm making sense. I can answer questions if you have any. I'll try anyway

I'm dumb as dirt with this stuff! Nov 7 2008 Message boards Number crunching Broadband Speed Test speedtest Message board moderation Feb 10 2021 For example Orbi 479 12 Mbps Speedtest 301 13.2 Fast 150 13 Google 227 14.8 These use different single vs multi threaded downloads etc

methods but one would expect Orbi and Speedtest to be similar in their methods May 23 2019 Very simple and obvious The Ookla Speedtest App on the iDevice or the Android device does test the complete connection including the typically weaker wireless connection from the device to the router or wireless AP

The Nighthawk App does remote control a Ookla Speedtest powered client operating on the Nighthawk router the aim is to get a reasonable representation of the routers Nov 26 2021 I'm confused with the WiFi Analytics section of this app

nbsp When I check my Internet nbsp speed on the Internet Speed section it's 32.15 Mbps. nbsp When Jan 29 2021 So I recently just setup ipv6 on my router but the speeds seem to be lacking compared to ipv4. I'll give some details below of my equipment and Nov 9 2024 But Wifi is fast

Apologies as I'm not super technically savvy but Only recently noticed that the speed of the connection to my desktop measured via speedtest would drop down to around 100 150Mbps when I'm under Comcast's 800Mbps plan

My wi fi is surprisingly fast sometimes hitting 900Mbps for whatever reason using the same CAX30.
