Jan 14 2024 Does anybody know the bioavailability for insufflation of 7 OH? I've seen a lot of people say they snort it but I'm wondering what it's like compared to orally. Jul 25 2011 I have 50mg of 7hydroxymitragynine dissolved into 8mL of 190 proof alcohol

I evapored some of the alcohol away and am left with about 3 mg of powder which I assume is 7hydroxymitragynine

Is this safe to snort since it is not the plant material? Also, how should I dose it if I want to take it? Jul 14 2025 So I've been snorting 7OH powder 400-600mg a day for almost a yr now. This method only appears to work on certain powders, specifically the fluffy ones and not the crystalline but even some of the fluffy ones don't work. I'm wondering if it has to do with Pseudo in the powder? Is Pseudo more Jan 19 2021 I get the fixation to snort things

I used to snort Focalin tablets on a daily basis for years although never did enjoy snorting Adderall or Dexedrine given the sheer size of the tablets and lack of any gain effect wise from snorting them

Ritalin and Focalin however are very noticeably different when snorted. However, Feb 22 2011 you may snort a 10mg tablet and only actually introduce 6 mg with the other 4 mg being lost in the nasal canal

Either method of ingesting (snorting or oral) will hit your bloodstream at relatively the same time. With the snorting method, you will see a 4-6 min decrease in the time it takes for it to enter the bloodstream. Feb 26 2010 A fair number of drugs such as Cocaine, Heroin, Buprenorphine, etc., as well as other various opiates and other substances are most efficiently or at least significantly efficiently absorbed through insufflation or snorting.

DISCLAIMER [While the above mentioned drugs are most Mar 14 2011 I'm getting mixed reports. Never tried Lyrica before but some people say it hits in 5 minutes when insufflated and some people say it's pointless]

So what's the difference in bioavailability? Does it really hit in five minutes? How long does it last when snorted vs taken orally? Any difference Oct 13 2006 you can snort Adderall XR just crush up the beads until it's a very fine powder and sniff.

You can make a makeshift mortar and pestle using a cereal bowl and a bent spoon just keep your free hand covering the bowl so the beads don't fly away as you crush 'em.

In my experience if the beads are effectively crushed I found no difference between snorting Adderall XR powder and regular Adderall Mar 13 2019 Do you want
