Snow consists of individual ice crystals that grow while suspended in the atmosphere usually within clouds and then fall accumulating on the ground where they undergo further changes

[2] It consists of frozen crystalline water throughout its life cycle starting when under suitable conditions the ice crystals form in the atmosphere increase to millimeter size precipitate and 4 days ago Michigan is under a blanket of heavy snow Monday as a powerful winter storm and bomb cyclone bring blizzard conditions across the Upper and Lower Peninsula Dec 14 2025 Snow the solid form of water that crystallizes in the atmosphere and falling to the Earth covers permanently or temporarily about 23 percent of the Earth's surface

A brief treatment of snow follows

For full treatment see climate Snow and sleet. Snow falls at sea level poleward of latitude AccuWeather's Winter Center provides both national and local 24 hour snowfall forecast maps as well as the National Weather Service's Snow Depth map Dec 25 2025 A major new winter storm is expected to bring ice and snow to the upper Midwest on Thursday with the system moving through the lower Northeast on Friday. Snow also affects wildlife migration, hibernation and survival. Snow is also an important part of winter sports and recreation such as skiing, snowboarding, sledding and snowshoeing 1 day ago An overview with discussion and images of snow around the country Your trusted source for the most accurate weather forecast snow report high resolution weather maps and ski conditions information. What is snow? Snow is precipitation that forms when water vapor freezes

It is not frozen rain but a crystallization of ice that typically forms in clouds. When temperatures drop below 0°C (32°F) and there is sufficient humidity in the atmosphere, water vapor condenses directly into ice without going through the liquid stage

Once an ice crystal has formed, it absorbs and freezes additional snow. How snow forms: Snow is an accumulation of packed ice crystals, and the condition of the snowpack determines a variety of qualities such as color, temperature and water equivalent

As weather conditions change, the snowpack can change as well, and this affects the characteristics of the snow.
