The nail fold is where the skin and nail come together. Healthcare providers treat paronychia with antibiotics to kill the infection. Providers may also drain pus, thick infectious fluid that builds up around a wound.

They may also culture the fluid to see what specific bacteria might be causing the infection. Nov 11 2025 Paronychia: an easy-to-understand guide covering causes, diagnosis, symptoms, treatment, and prevention, plus additional in-depth medical information. A nail bed infection, paronychia is a common nail infection with various causes and symptoms that include soreness and redness around the nail.

Sometimes pus causes it to turn a yellow-green color. May 25 2024 WebMD explains various finger infections, including causes, symptoms, diagnosis, treatment, and outlook. Oct 18 2025 Paronychia is a type of nail infection most commonly caused by the bacteria called *Staphylococcus aureus*, which affects the skin around the nail, called nail folds.

It can also occur as a result of a fungal nail infection, referred to as onychomycosis. Symptoms include redness, swelling, pain, and pus discharge. 1 Feb 4 2025 Initial symptoms of acute paronychia include a warm, red, and swollen area on the skin around the fingernails or toenails.

If left untreated, the infection can progress to an abscess, which is when a collection of pus accumulates under the skin.

In cases where the abscess is close to the nail plate, pus may find its way through the nail fold and drain spontaneously or upon light pressure. May 5 2025 What is paronychia? Paronychia is a skin infection around the fingernails or toenails.

It usually affects the skin at the base (cuticle) or up the sides of the nail. There are two types of paronychia. Acute comes on suddenly and may not last long; it usually occurs on fingers.

Chronic lasts longer and may occur on your [] Jun 20 2023 Paronychia is an infection of the skin around your fingernails and toenails.

The infection can be caused by bacteria or a type of yeast called *Candida*.
