Also if I m not mistaken Steenrod gives a more direct argument in Topology of Fibre Bundles but he might be using the long exact sequence of a fibration which you mentioned Dec 14 2025 About two years ago I came up with this problem and I still can t find the solution so I need help with it

Dad and his son are ordering a pizza

The pizza arrives and son cuts it in finite number Oct 3 2017 I have known the data of $\pi_m SO_n$ from this Table
$$\overline{\pi_m SO_n} = \pi_m SO_n$$

Homotopy groups of Apr 24 2017 Welcome to the language barrier between physicists and mathematicians

Physicists prefer to use hermitian operators while mathematicians are not biased towards hermitian operators

So for instance while for mathematicians the Lie algebra \mathfrak{so}_n consists of skew adjoint matrices with respect to the Euclidean inner product on \mathbb{R}^n physicists prefer to multiply them Dec 16 2024 You can let Spin_n act on S^{n-1} through SO_n

Since $\text{Spin}_{n-1} \subset \text{Spin}_n$ maps to $SO_{n-1} \subset SO_n$ you could then use the argument directly for Spin_n using that Spin_3 is simply connected because $\text{Spin}_3 \cong \text{SU}(2)$

I m not aware of another natural geometric object Dec 7 2024 So the quotient map from one Lie group to another with a discrete kernel is a covering map hence $\text{Pin}_n \rightarrow \text{Pin}_n / \mathbb{Z}_2 \cong \mathbb{R}P^n$ is a covering map as Moishe Kohan mentioned in the comment

I hope this resolves the first question. If we restrict Pin_n group to Spin_n The question really is that simple Prove that the manifold $SO_n \subset GL_n(\mathbb{R})$ is connected

it is very easy to see that the elements of SO_n Oct 23 2019 A son had recently visited his mom and found out that the two digits that form his age eg 24 when reversed form his mother s age eg 42

Later he goes back to his place and finds out that this whole age reversed process occurs 6 times. And if they mom+son were lucky it would happen again in future for two more times Can you answer my son s fourth grade homework question Which numbers are prime have digits adding to ten and have a three in the tens place? Nov 18 2015 The generators of SO_n are pure imaginary antisymmetric $n \times n$
