Also if I'm not mistaken Steenrod gives a more direct argument in Topology of Fibre Bundles but he might be using the long exact sequence of a fibration which you mentioned Dec 14 2025 About two years ago I came up with this problem and I still can't find the solution so I need help with it

Dad and hissonare ordering a pizza

The pizza arrives and son cuts it in finite number Oct 3 2017 I have known the data of  $\pi_m$   $SO_N$  from this Table

Homotopy groups of Apr 24 2017 Welcome to the language barrier between physicists and mathematicians

Physicists prefer to use hermitian operators while mathematicians are not biased towards hermitian operators

So for instance while for mathematicians the Lie algebra  $\mathfrak{so}_n$  consists of skew adjoint matrices with respect to the Euclidean inner product on  $\mathbb{R}^n$  physicists prefer to multiply them Dec 16 2024 You can let  $\text{Spin}_n$  act on  $\mathbb{S}^{n-1}$  through  $\text{SO}_n$

Since  $\text{Spin}_n$  maps to  $\text{SO}_n$  you could then use the argument directly for  $\text{Spin}_n$  using that  $\text{Spin}_3$  is simply connected because  $\text{Spin}_3 \cong \mathbb{S}^3$

I'm not aware of another natural geometric object Dec 7 2024 From here I got another doubt about how we connect Lie stuff in our Clifford algebra settings

Like did we really use fundamental theorem of Gleason Montgomery and Zippin to bring Lie group notion here? The question really is that simple Prove that the manifold  $SO_n \subset GL_n(\mathbb{R})$  is connected

it is very easy to see that the elements of  $SO_n$  Oct 23 2019 A son had recently visited his mom and found out that the two digits that form his age eg 24 when reversed form his mother's age eg 42. Later he goes back to his place and finds out that this whole age reversed process occurs 6 times

And if they mom+son were lucky it would happen again in future for two more times Can you answer my son's fourth grade homework question Which numbers are prime have digits adding to ten and have a three in the tens place? Nov 18 2015 The generators of  $SO_n$  are pure imaginary antisymmetric  $n \times n$  matrices

How can this fact be used to show that the dimension of  $SO_n$  is  $\frac{n(n-1)}{2}$ .
