A sphincter is a circular muscle that normally maintains constriction of a natural body passage or orifice and relaxes as required by normal physiological functioning. Sphincters are found in many animals Dec 8 2025 Sphincters are muscles that control the flow of substances in the body

There are over 60 types of sphincters found throughout the digestive tract urinary tract blood vessels and eyes

The internal and external anal sphincters control the process of defecation Sep 3 2025 Sphincters are circular shaped muscles that open and close to control the flow of food air bile pee and poop through your body. When a sphincter is relaxed a substance can easily flow through it

But when it's contracted or tightened nothing can flow through it because it's closed Aug 21 2025 A sphincter is a circular muscle that functions like a natural valve in the body

These muscles control the passage of substances through various openings or tubes Oct 10 2024 The internal anal sphincter is involuntary while the external anal sphincter is under voluntary control

Together they maintain continence and allow for controlled defecation. The meaning of SPHINCTER is an annular muscle surrounding and able to contract or close a bodily opening sphincter muscle any of the ringlike muscles surrounding and able to contract or close a bodily passage or opening.
