CallCenter.js is an AI powered VoIP agent system that enables automated phone calls using OpenAI's real time voice capabilities and SIP telephony protocols

The system serves as a bridge between AI assistants via MCP integration command line interfaces or programmatic APIs and traditional phone networks allowing software to initiate and conduct voice conversations. LiveKit includes a free Model Context Protocol MCP server with tools for AI coding assistants to browse and search the docs site.

The following instructions cover installation of the MCP server and advice for writing an AGENTS.md file to get the most out of your coding agent Aug 3 2018. It is possible that the MCP server cannot resolve the hostname of other servers in the network.

In this case there are a few options. If DNS is used ensure that the MCP server is configured to use the correct DNS server and that it can resolve the hostname correctly. Recommended Aug 21 2025 Video Compressor MCPA Model Context Protocol MCP server for video compression and optimization: bitrate, resolution, frame rate and codec adjustment.

Features: Bitrate Control, Adjust video bitrate for size optimization, Resolution Scaling, Change video resolution with aspect ratio preservation, Frame Rate Adjustment, Modify video frame rates, Codec Selection, Choose optimal video codecs for the Media Server. Codecs are listed sorted by their primary Priority values.

If several Media Server codecs have the same primary Priority values, they are listed in the same order as they were listed in the peer's offer.

Note: the set of supported codecs depends on the platform. CommuniGate Pro is running on To use the server, set up both the Filesystem MCP Server and the Shaka Packager MCP Server. Configure them in Claude Desktop and use commands to analyze or process video files.

Key features of Shaka Packager MCP Server? Video analysis to extract stream information and codecs. Media packaging for HLS and DASH formats. Changes Take Effect At start/restart. Defines the minimum data size in bytes that can be sent. Note that this number is applied to all codecs with fixed frame size.

It will be rounded down to the nearest multiple of the codec frame size. This parameter will be disabled when variable frame size codec is used.

Set to 1 to disable the limit. Voice Platform Media Control Platform. The Known Issues and Recommendations section is a cumulative list for all 8.5.x releases of Voice Platform Media Control Platform.
