Dec 21 2025 The first picture contains 4 grid deduction puzzles in disguise

The window is a star battle puzzle the fairy lights is a Flow Free puzzle
Numberlink with colors the fire place is a nonogram with the right side saying
set of x shaded cells to my left before the set shaded by the left clue and the
baubles is a masyu puzzle with green = black red = white

This is hinted inside the Dec 10 2025 I was given a PSE themed advent calendar
this year

I personally think it doesn't look great whoever drew the tinsel has clearly
never seen a real Christmas tree But just as I was about to scratch off
the star for day 10 I realised I could figure out what I was getting for Christmas
May 10 2025 Albert.Lang beat me to the punch but here's a nice state diagram The
red point in each configuration is the last point moved and configurations are
labeled with the first prime that brings us to it

Follow the arrow whose label is the current prime modulo 4 to reach the next
configuration. For the top left and bottom right configurations follow the
unlabeled arrow regardless Jun 6 2025 Make an enlarged copy of the eight
pointed star shown in the diagram

Place a penny on any point of the star and slide it along a line to another point.
Place a second penny on any vacant point and similarly slide it along a line to
reach another open point. Continue in the same manner until 7 pennies have been
placed on 7 points leaving only one vacant

The task sounds easy and is easy but Nov 6 2025 Two vertically aligned and
touching congruent blue circles are inscribed in a pendant the black
quadrilateral in a regular star as shown below

Can you fit another circle of the same size that's tangent to the two circles and
the horizontal segment of the star and passes through the right vertex of the
pendant? Nov 3 2025 Four vertically aligned touching circles of equal radius are
inscribed in a pendant the black quadrilateral inside a regular star as shown in
the figure below

Show that the centre of the green circle Aug 3 2022 Having played some more normal
difficulty puzzles on that site here are a few things I've noticed The puzzles
are algorithmically generated

The difficulty between two puzzles in the same category can vary significantly
Most of the normal 10x10 puzzles I saw and even most hard 10x10 ones are set up
such that you can easily deduce where a star is within a minute of starting

I don't Feb 17 2025 Line 1 Beatles drummer Ringo 5 anchors that absorb water
