Astaris a luminous spheroid of plasma held together by self gravity. [1] The neareststar to Earth is the Sun

Many otherstarsare visible to the naked eye at night their immense distances from Earth make them appear as fixed points of light Dec 20 2025 Astaris any massive self luminous celestial body of gas that shines by radiation derived from its internal energy sources

Of the tens of billions of trillions ofstarsin the observable universe only a very small percentage are visible to the naked eye May 2 2025 Astars gas provides its fuel and its mass determines how rapidly it runs through its supply with lower massstarsburning longer dimmer and cooler than very massivestars Astaris a huge sphere of very hot glowing gas.Starsproduce their own light and energy by a process called nuclear fusion

Fusion happens when lighter elements are forced to become heavier elements. When this happens a tremendous amount of energy is created causing thestar to heat up and shine

Stars come in a variety of sizes and colors Oct 22 2025 Main Sequence Theprotostarcontinues to collapse until nuclear fusion begins in its core leading to the formation of a stablestar

This stage is known as the main sequence where thestarburns hydrogen into helium Where DoStarsCome From? Everystarforms in a huge cloud of gas and dust. Over time gravity causes the cloud to contract drawing the gas closer and closer together

As more gas accumulates at the center it becomes denser and pressure increases. This causes it to heat up and begin to glow Apr 11 2025 In a very broad sense astaris simply one of those twinkling points of light you can see in the night sky

But thats not terribly satisfying in either lexicological or physical terms.
