Astaris a luminous spheroid of plasma held together by self gravity. [1] The neareststar to Earth is the Sun

Many otherstarsare visible to the naked eye at night their immense distances from Earth make them appear as fixed points of light 1 day ago Hawaii s top source for breaking news Hawaii news business sports politics arts and entertainment traffic weather and more Dec 20 2025 A star isany massive self luminous celestial body of gas that shines by radiation derived from its internal energy sources

Of the tens of billions of trillions of stars in the observable universe only a very small percentage are visible to the naked eye May 2 2025 Astars gas provides its fuel and its mass determines how rapidly it runs through its supply with lower massstarsburning longer dimmer and cooler than very massivestars A star is a huge sphere of very hot glowing gas

Stars produce their own light and energy by a process called nuclear fusion. Fusion happens when lighter elements are forced to become heavier elements. When this happens a tremendous amount of energy is created causing the star to heat up and shine

Stars come in a variety of sizes and colors These large swellingstarsare known as red giants. But there are different ways astars life can end and its fate depends on how massive thestaris Oct 22 2025 Yellow DwarfStars Our sun is a yellow dwarfstar with a temperature of about 5 500 degrees Celsius

Thesestarsare medium sized and are in the middle of the temperature range Explore themesmerizing world of stars their life cycle from nebulae to black holes different types like red giants and white dwarfs Dec 20 2025 The simplest way to describe a star is that it is a great ball of fire but it is more complicated than that

A star is a giant ball of hydrogen turning into helium through nuclear fusion Where Do Stars Come From? Everystarforms in a huge cloud of gas and dust. Over time gravity causes the cloud to contract drawing the gas closer and closer together

As more gas accumulates at the center it becomes denser and pressure increases. This causes it to heat up and begin to glow.
