

%strip teens 1 the school% string strip vs lstrip vsrstrip in Python

Stack String.strip in Python Stack Overflow python What.

â â â â â Rating: 5 (8.705.610 reviews) - Free • Strip • Access

Original URL: <https://tools.orientwatchusa.com/strip-teens-1-the-school.pdf>

lstrip rstrip andstripremove characters fromtheleft right and both ends of a string respectively. By default they remove whitespace characters space tabs linebreaks etc Withoutstrip bananas is present inthedictionary but with an empty string as value

Withstrip this code will throw an exception because it stripsthetab ofthebanana  
line Dec 9 2012 I was told it deletes whitespace but s = ss asdas vsadsafas asfasasgas print s.strip prints out ss asdas vsadsafas asfasasgas shouldn t it be ssasdasvsadsafasasfasasgas? 3 Just to add a few examples to Jim s answer according to .strip docs Return a copy ofthestring withtheleading and trailing characters removed.Thechars argument is a string specifyingtheset of characters to be removed

If omitted or None thechars argument defaults to removing whitespace  
TheString.strip String.stripLeading and String.stripTrailing methods trim white space [as determined by Character.isWhiteSpace ] off eitherthefront back or both front and back ofthetargeted String Oct 8 2015 3 Pointers stripreturns a new string so you need to assign that to something

better yet just use a list comprehension Iterating over a file object gives you lines not words so instead you can readthewhole thing then split on spaces.Thewith statement saves you from having to call close manually Oct 1 2016 I want to eliminate allthewhitespace from a string on both ends and in between words

I have this Python code def my\_handle self sentence = hello apple sentence.strip  
But that Aug 29 2012 list = map str.strip list This will applythefunction str.strip to every element in list return a new list and storetheresult back in list Feb 19 2012 37The strip method removes whitespace by default so there is no need to call it with parameters like \t or \n

However strings in Python are immutable and can t be modified i.e.theline.strip call will not changethe line object.Theresult is a new string which is returned bythecall Jun 17 2014 But when usingstrip strip unneeded it changedthesize from 400+ mb to 55 mb which is still considerable yet allowedthelibrary to be accessed from other shared libraries

In short I d truststrip. Maybe your application cannot be reduced any further without code changes.
