Sweat is a community driven platform offering fitness programs discussions and support to help individuals achieve their health and wellness goals. I was wondering if anyone has substituted one of the upper body days for the lower body days? I'm not getting as great Dec 26 2020. SweatSoldering is the optimum way to bond the board and the metal clad.

Just solder paste is required. Going with adhesive will increase the cost of fabrication and also the cure temperature requirement for the adhesive will make the fabrication more complex.

Thank you all Feb 8 2021. Normally where people get burned is that their boards get put in a condensing environment even though everything is specified as non condensing. But that's not a design problem so much as a specifications issue. tl dr Don't sweat it and just do your design.

Good luck. The exact ranges will change depending on how the textile is cut whether it's soaked with sweat the temperature how old the material is how it's mounted etc.

The entire thing needs to be as small as possible because it's mounted on the hand so minimizing the number of components is a big plus Jun 2 2016 I have >20 different types of MOSFET from Fairchild that I would like to add to LTSpice's model tree. Fairchild encrypts their libraries.

What is a straight forward method of adding their libraries Nov 14 2023 But clearly assuming adequate filtering is possible it's not at all a necessary improvement so don't sweat leaving it open either.

If I am using the shield is the above drawing optimal? Or should I do separate shielding for any signal as well? For example [UART TX and RX in a shield] + [all remaining signals] Oct 28 2009 How do I know when to use lead flux core lead free or any other kind of solder out there? Do you have any tips on solder gauge for specific applications? Mar 2 2021 Hand sweat consists mostly of water and trace amounts of urea minerals and lactic acid.

I would say that lactic acid is a moderate acid with a pKa of approx. 3.5 but we are talking trace amounts in sweat. Then depending on the actual skin resistance due to air humidity sweat etc a certain voltage may result in a current that is or is not lethal.

You may change the values in the above to your own estimates and compute the current value through the heart as a simple exercise in basic network theory or run spice.
