Jun 17 2015 Swiftneeds a convention for saying what the name of a function is including not only the function name itself before the parentheses but also the external names of the parameters 8Swifts nil is not the same as nil in Objective C. In Objective C nil is a pointer to a non existent object

InSwift nil is not a pointerit is the absence of a value of a certain type. Optionals of any type can be set to nil not just object types. NULL has no equivalent inSwift

nil is also called nil inSwiftNil has no equivalent Feb 3 2022 77 I m bridging the sync async worlds inSwiftand doing incremental adoption of async await. I m trying to invoke an async function that returns a value from a non async function

I understand that explicit use of Task is the way to do that as described for instance here. The example doesn t really fit as that task doesn t return a value 415 InSwift2 and onwards it s possible to add default implementations of a protocol

This creates a new way of optional methods in protocols 1 day ago I am fairly new toswift SwiftUI and making a simple face and card detection app using Vision

Basically its just a camera preview layer and upon face card detection it crops the image and Jun 3 2019 Swift5.1 does not appear to have some as a keyword and I don t see what else the word some could be doing there since it goes where the type usually goes

Is there a new unannounced version ofSwift? Is it a function that s being used on a type in a way I didn t know about? What does the keyword some do? May 21 2015 The question of what purpose in serves has been well answered by other users here in summary in is a keyword defined in theSwiftclosure syntax as a separator between the function type and the function body in a closure { parameters and type in function body } But for those who might be wondering but why specifically the keyword in? here s a bit of history shared by Joe Groff Apr 17 2016 With the release ofSwift3.0 being available for Mac OS and Windows does this mean you can compile and runSwiftcode on Windows? If so what compiler do you use for Windows? Jul 3 2014 0SWIFT4.2 Sometimes this happened just because there is space in slug OR absence of URL encoding for parameters passing through API URL TheSwiftDocs on Control Flow explain the idea behind that Using a guard statement for requirements improves the readability of your code compared to doing the same check with an if statement.
