I ve a scenario how to install 3rd party application on Azure portal and provide access to external user outside the organisation So basically I can t RDP my VM because internally in the VM firewall doesn t allow RDP connections which was in the list of permitted applications in firewall settings I currently access Azure SQL Database by allowing a client IP through the Azure firewall

In a previous life when I was running PostgreSQL on a Linode VM I used OpenVPN to connect to the VM from anywhere regardless of IP Apr 12 2012 Is there an alternate Setting name that i can use to configure the value for aspnet MaxHttpCollectionKeys in my ServiceDefinition.csdef and ServiceConfiguration.cscfg files? I d like to set Azure AD Connect that syncs our on premise AD to Office 365 to block users form logging in if their on premise AD account has expired

I can run a report on premise and disable the accounts but I prefer to have them auto disabled when their account is synced with Azure AD As a testing for Azure Dev Test LAB Automation offering I am trying to import some Azure DSC Automation Configuration however for any one of them import failed with error as below A Global Administrator can delete an Azure AD directory from the Azure Management Portal

When a directory is deleted all resources contained in the directory are also deleted so you should be sure you dont need the directory before you delete it Question 0 Sign in to vote Hi I am new to hdinsight I created storage myhdinsightstore and a cluster stackoverflowanalysis then tried to run command from azcopy If you create a site to site VPN between your on premise network and Azure virtual network they connect via the IPsec tunnel

Based on my experience on the Azure side you dont need to do anything in the Windows Firewall or create an endpoint on the Azure VMs I am after some best practices implications of changing time zone on Microsoft Azure or cloud in general talk

Is it recommended to change time zone on your Virtual Machine on Microsoft Azure considering Azure runs all its services in UTC?.
