TRK proteins are receptor tyrosine kinases. Also called tropomyosin receptor kinase protein family. A family of proteins that are found on nerve cells

They are involved in cell signaling pathways that control cell growth cell maturation and cell survival Jun 11 2025 Tropomyosin receptor kinase TRK proteins are encoded by neurotrophic tyrosine receptor kinase NTRK genes

Fusions involving one of these three genes can produce a chimericTRKfusion protein that drives downstream signaling and cancer growth Trk receptors are a family of tyrosine kinases that regulates synaptic strength and plasticity in the mammalian nervous system

[1][2]Trk receptors affect neuronal survival and differentiation through several signaling cascades TRKfusions are oncogenic drivers of various adult and paediatric cancers

The first generationTRKinhibitors larotrectinib and entrectinib were granted landmark tumour agnostic regulatory approvals for the treatment of these cancers in 2018 and 2019 respectively TheTRKproteins are receptor kinases that help regulate cell signaling and function in healthy tissues

1 2 3 Rearrangements in the NTRK genes can result in two genes fusing together and producing alteredTRKproteins which can lead to uncontrolled growth of cancer cells

1 2 Nov 7 2024 Targeted therapy revolutionized cancer treatment with gene fusions leading the way when the FDA approved imatinib in 2001 to target the BCR ABL fusion in chronic myelogenous leukemia May 23 2025 Mounting evidence suggests thatTrk receptors can be categorized into three types TrkA TrkB and TrkC

These receptors play a crucial role in facilitating neuronal growth and development.Trk receptors influence the survival and differentiation of neurons via many signalling cascades.
