Jun 4 2012 A remark regardless of whether it is true that an infinite union or intersection of open sets is open when you have a property that holds for every finite collection of sets in this case the union or intersection of any finite collection of open sets is open the validity of the property for an infinite collection doesn't follow from that

In other words induction helps you prove a 2 days ago Mathematics Stack Exchange is a platform for asking and answering questions on mathematics at all levels NeilsonsMilk ah it did not even occur to me that this involves a step

See where I learned mathematics it is not unusual to first define when a sequence converges to zero and we have a word for those sequences Nullfolge and only then when a sequence converges to an arbitrary number by considering the difference Prove that that  $\{U_n\}$  which is the set of all numbers relatively prime to  $n$  that are greater than or equal to one or less than or equal to  $n$  is an Abelian Nov 11 2018 The Integration by Parts formula may be stated as  $\int uv = uv - \int u v$ . I wonder if anyone has a clever mnemonic for the above formula

What I often do is to derive it from the Product R Jan 20 2015 I assume by  $\mathbb{Z}_n$  you mean the set of  $n$ th roots of unity there might be other subgroups isomorphic to that after all Slightly relevant you can see my answer on this thread for a proof that uses double induction just to get you exposed to how the mechanics of a proof using double induction might work May 9 2016 Prove that the sequence  $\{1, 11, 111, 1111, \dots\}$  will contain two numbers whose difference is a multiple of 2017

I have been computing some of the immediate multiples of 2017 to see how Jul 6 2015 At the risk of sounding very unmathematical how do the infinite set of points on the circumference of each circle map to each other to accomplish this? Consider Circle A rolling along a straight line the length of the circumference of Circle B

Then it will revolve 3 times Nov 2 2022 I meant it to read  $P(S_1) \cdot P(S_n)$ . The product of those probabilities given the assumption is true.
