Feb 3 2012 Set ExecutionPolicy Restricted When run powershell.exe test.ps1 at command prompt I got LocalMachineUnrestrictedSo I did a Set ExecutionPolicyUnrestricted Scope Process Force May 13 2014 This command will check if the Execution Policy is set tounrestricted

If not it will set it tounrestricted then run the target PowerShell script. Finally the command will set the Execution Policy back to the previous value I have a batch file that executes a PS script

It is like this echo off powershell.exe executionpolicyunrestricted command .\MyPSScript.ps1 In Unrestricted mode I can t run it without admin user pass so I tried the Dissalowed mode and I added a path rule and hash rule in User configuration\Windows settings\Security settings\Software restriction policies\Additional rules for my file

The result is the same admin user pass is required Set ExecutionPolicyUnrestrictedThis will work for the setting of privaledgees but I am currently asking about how I can use this in an IF statement to first check then apply like this dunno about WDS Answer File called scripts but if you call powershell.exe you can specify the parameter ExecutionPolicyUnrestricted

If that s viable to do directly great Donc le script est sur votre poste et vous essayez d excuter travers ce scripte des commandes distantes ce qui revient en quelques sorte lexcution de ce script sur les machines distantes il faudra donc mettre executionpolicy surUnrestricted il faut aussi paramtrer winrm sur les machines distantes avec Enablepsremoting Nov 2 2014 Try running the Apps troubleshooter

This tool can automatically identify and fix some problems with apps and the Store

S.Sengupta Windows Entertainment and Connected Home MVP Sunday November 2 2014 11 15 PM 0 Sign in to vote Hi DutchTom18 Besides use apptroubleshooter I would suggest the following methods for try Re regsiter Windows Store powershell ExecutionPolicyUnrestrictedAdd > Set ExecutionPolicyUnrestricted> Get AppXPackage AllUsers Foreach {Add AppxPackage DisableDevelopmentMode Register \$ \$_.InstallLocation \AppXManifest.xml }.
