Dec 8 2023 It doesn't appear to be working anymore when going from vDS7.0.3 to vDS8.0.0

Any tips or tricks that I might be missing or am I simply left with pulling an uplink out and building a Standard Switch on one of the source hosts to go from SS to vDS? I don't want to upgrade vCenter Hosts and vDS at source site. TIA! Aug 19 2022 VSS vs VDS We still run VSS We are on 6.5u3

Why should I convert to VDS? What do you use VDS for? How many hosts do you have? Jun 14 2021 When $V_{ds} \geq V_{gs} - V_{th}$ the MOSFET is in saturation. V_{DS} headroom that you need to allocate for a MOSFET to remain in saturation what does that mean exactly? Is this at all related to the V_{ds} beyond which a MOSFET goes into velocity saturation? Or does V_{dsat} refer simply to $V_{gs} - V_{th}$? both mean the same thing However this requires relatively high V_{ds} and I_{ds} and low V_{gs} and it will quickly overheat and destroy most MOSFETs

Instead we intentionally drive much larger V_{gs} and design the circuit so I_{ds} is low enough that the MOSFET acts more like a resistor while on giving much lower V_{ds} May 26 2021 V_{ds} means Voltage drain to source

Safe operating area just shows you under various operating conditions what is allowed. V_{dsmax} is the maximum voltage that should never be exceeded

Keep in mind just because it's allowed though doesn't mean that you are not dissipating a lot of power May 1 2021 V_{ds} is the actual drain source voltage of the transistor at the current operating point V_{dsat} is basically $V_{ov} - V_{eff}$ except not quite as simple as square law $V_{gs} - V_t$

It is also calculated down into subthreshold region where it bottoms out at around 80mV and in newer technologies the linear velocity saturated region but the principle is the same it's the V_{ds} you need to have higher R_{ds} Mar 23 2021 There's no chance this is an HCL issue

For a homelab I'm running vSphere 7.0 U2 on my 4 DL360p gen8s with an all flash vSAN on HCL listed H240 HBAs without any vDS problems. Deploying HCI Bench went perfectly without issue on the vDS

Are your portgroups static or ephemeral? Have you tried looking at hostd.log on the node to see if there's any port errors? Does your vDS currently have any Jan 4 2023 Hi everyone. Current production setup is having a ton on vLANs using standard vSwitch

Since we have the license with vDS I want to transfer from Standard vSwitch to vDS

If I create vDS with all the vLANs and assigning the same uplinks as from the Standard vSwitch then transfer the VMs will it break something? What is the
