Venus is one of the four terrestrial planets in the Solar System meaning that it is a rocky body like Earth. It is similar to Earth in size and mass and is often described as Earth's sister or twin. [31] Venus is very close to spherical due to its slow rotation

[32] It has a diameter of 12 103.6 km 7 520.8 mi only 638.4 km 396.7 mi less than Earth and its mass is 81.5% of Earth May 8 2025 Facts About Venus Venus is the second planet from the Sun and the sixth largest planet

It's the hottest planet in our solar system. Venus is a cloud swaddled planet and our nearest planetary neighbor. It has a surface hot enough to melt lead Dec 2 2025 Venus second planet from the Sun and sixth in the solar system in size and mass

No planet approaches closer to Earth than Venus at its nearest it is the closest large body to Earth other than the Moon Venus is also called the morning star and evening star because it appears relatively close to the Sun in the sky shortly after sunset or before sunrise

Since Venus is the brightest planet as seen from Earth's surface it has been observed and incorporated into human culture since ancient times Venus is the second planet from the Sun and the closest to Earth's orbital path

It is a rocky planet and its size structure and chemical composition is similar to that of Earth. For this reason Venus is often called Earth's twin

At the same time Venus is dramatically different from Earth Dec 3 2024 Named after the ancient Roman goddess of beauty Venus is known for its exceptional brightness

Find out about the volcanoes that dot Venus's surface the storms that rage in its atmosphere and the surprising feature that makes Venus outshine every planet or star in the night sky Venus is about the same size as Earth but a very different planet

It rotates in a backward direction a characteristic it shares with Uranus. Venus is nearer the Sun than Earth and has a very thick atmosphere the surface temperature is extremely high as much as 475 Celsius 900 Fahrenheit.
