Feb 3 2010 Is there a way to know if the Windows machine I m working on isvirtualor physical? I m connecting with RDP to the machine

If it s avirtualmachine it is working and handled by VMWare I was wondering if someone could give me a simple guide on how to set upvirtualnetworking in VirtualBox 4.0.2 so that the following scenarios work Both Host and Guest can access the Internet Sep 12 2022 I would like to create a redundant HAProxy configuration with Keepalived for determining which HA Proxy is active HAProxy for doing load balancing and failover I will be using a cloud service Apr 16 2023 Everything works fine but I am not able to set avirtualpath for a user or group which is an UNC path \\servername\\share\\directory

I am using standard ports 21 and 22 and there is no firewall between the client and the server. Filezilla server runs with local system account but is configured to use an admin user for filesystem access Mar 4 2020 We created some newvirtualdesktop pools on azure

Now we want to configure that every session which is disconnected ends immediately

We configured this registry key Registry Hive Jun 19 2025 0 I m running Hyper V on Windows 11 and trying to limit the network bandwidth of avirtualmachine using the Maximum Bandwidth setting in the Hyper V Manager GUI under Network Adapter Advanced Features Bandwidth Management

I ve created a proper ExternalVirtualSwitch not the Default Switch and assigned it to the VM Can you set up a website to make a default redirect to avirtualdirectory? I tried to do this but it overrode every single website in my setup to that redirect Jun 21 2025 All computer names in your infrastructure seem to have at least 15 characters in length

NetBIOS names can be up to 15 characters but Kerberos protocol somehow uses extra character in SPN names such as \$ sign. For Kerberos to work properly and to be in the safe side max. 14 character computer length should be considered

This is valid for CNO Cluster Name Object names and VCO Virtual May 1 2024 0 I am using Azure for myvirtualmachines and it gives you a way to block IP addresses in the Network Security Group. However this IP list is getting quite long

Is there a better option to do than this in Azure with my VM? Sep 29 2023 2 I need to convert a Physical Server into a Hyper VVirtualmachine. I used the Disk2vhd Tool but when uploading the image it does not recognize the Operating System
