This section describes the statemachineimplementation strategies and coding aspects forhierarchicalstatemachinesin C and C++

Class ToastOven with ahierarchicalstatemachineused in the following examples ofcodegeneration Codegeneratorto build modern and robust event driven embedded real time systems based onhierarchicalstatemachinescreated with UML tools like Enterprise Architect UModel Magic Draw Papyrus Cadifra StateMachineFundamentals This page has interactive examples to help you learn about StateSmithstatemachines

The examples use realcodegeneratedby StateSmith from the svg diagrams below. The same diagrams cangeneratecodefor any supported language. Scroll on down!

StateSmith is a cross platform free open source tool forgeneratingstatemachinesin multiple programming languages

Thegeneratedcodeis human readable has zero dependencies and is suitable for use with tiny bare metal microcontrollers video games apps web computers When the model meets the design requirements you thengenerateVHDL Verilog or SystemVerilogcodethat implements the design

You can simulate and synthesize thegeneratedHDLcodeby using industry standard tools and then map your system designs on FPGAs and ASICs struct the superclass

```
* QPseudoState QHsmTst_initial return me } void QHsmTst_initial QHsmTst *me
QEvent const *e { printf top INIT me >foo__ = 0 * init
```

extende May 31 2024 This python library provides an easy to learn and easy to use API for usingHierarchicalStateMachinesin your project

Thestatemachineis defined using a basic JSON string and includes convenience timers HSMCPP is a C++ library providing implementation ofstatemachinedesign pattern also known as statecharts. It allows you to easily addhierarchical HSM or finitestatemachine FSM to your project

The main motivation behind creating it was the lack of suitable non commercial alternatives which do not require the usage of large frameworks Sep 26 2023 The provided C code implements ahierarchicalstatemachine

Ahierarchicalstatemachineis a type of state machine where states can have sub states forming a hierarchy Sinelabore RTgeneratesreadable and maintainablecodefromhierarchicalUMLstatemachines

With its unique features and the Ccodegeneratorthetool covers well the requirements of embedded real time and low power application developers.
