Apr 15 2014 Expectedgirlsfrom one couple\$ {}=0.5\cdot1 + 0.25\cdot1 =0.75\$

Expected boys from one couple\$ {}=0.25\cdot1 + 0.25\cdot2 =0.75\$ 1 As I said

this works for any reasonable rule that could exist in the real world

An unreasonable rule would be one in which the expected children per couple was

infinite Feb 9 2022 Considering the population ofgirlswith tastes disorders I do

a binomial test with number of success  $k = 7$  number of trials  $n = 8$  and

probability of success  $p = 0.5$  to test my null hypothesis  $H_0 =$  my cake tastes

good for no more than 50% of the population ofgirlswith taste disorders

In python I can run `binomtest 7 8 0.5 alternative= greater` which gives the

following result Aug 18 2017 Probability of having 2girlsand probability of

having at least one girl Ask Question Asked 8 years 4 months ago Modified 8

years 4 months ago Jul 4 2023 1st 2nd boy girl boy seen boy boy boy seen girl

boy The net effect is that even if I don t know which one is definitely a boy

the other child can only be a girl or a boy and that is always and only a 1 2

probability ignoring any biological weighting thatgirlsmay represent 51% of

births or whatever the reality is Jan 10 2024 Use standard type for Greek

letters subscripts and superscripts that function as identifiers i.e

arenot variables as in the subscript girls in the example that follows and

abbreviations thatarennot variables e.g. log GLM WLS. Use bold type for symbols

for vectors and matrices. Use italic type for all other statistical symbols Apr

1 2018 Source Harvard Statistics 110 see 17 p

29 of pdf. A couple decides to keep having children until they have at least one

boy and at least one girl and then stop

Assume they never have twi Mar 2 2017 A probability problem In how many

different ways can 5 people sit around a round table? Is the symmetry of the

table important? Answer If the symmetry of the table is not taken into account

the May 16 2021 Whenyou use a paired T test youareessentially doing a one sample

test where your one sample consists of the paired differences between outcomes

in two groups

If you create a new sample of these difference values and then apply the formula

for a one sample T test you will see that this is equivalent to the paired test

Echoing the first answer. Don t bother to convert just model the counts and

covariates directly

If you do that and fit a Binomial or equivalently logistic regression model to

the boy girl counts you will if you choose the usual link function for such

models implicitly already be fitting a covariate smoothed logged ratio of boys

to girls. That s the linear predictor
