Aug 20 2020 I ve been playing around with Matplotlib and I can t figure out how to change the background colour of the graph or how to make the background completely transparent Feb 24 2023 248 I m not using CSS3. So I can t use opacity or filter attributes

Without using these attributes how can I make the background color transparent of a div? It should be kind of the text box example in this link. Here the text box background color is transparent

I want to make the same but without using the above mentioned attributes Is there a way to create a Loading Screen in Python 3.x using Tkinter? I mean like the loading screen for Adobe Photoshop with transparency and so on

I managed to get rid of the frame border a Dec 17 2019 I m trying to make all white pixels transparent using the Python Image Library

I m a C hacker trying to learn python so be gentle I ve got the conversion working at least the pixel values look correct but I can t figure out how to convert the list into a buffer to re create the image Jun 25 2012 I want to make the list menu s background disappear by using opacity without affecting the font

Is it possible with CSS3? So it s very very comfortable to type something on the console while looking to some learning material in the browser through the transparent background

I guess if there is a way to make VS Code transparent so I can write code and research in the browser at the same time instead of Alt Tabbing any time I have to switch so I dont have to Dec 8 2010 I want to make my own custom application window in a simple way so instead of using the winforms default window I am trying to make it transparent to use my background image instead The last option is to simply make a semi transparent .png image of the color you want in your desired image editor of choice set the background image property to the URL of the image and then you won t have to worry about mucking about with the CSS and losing the capability and organization of a nested div structure Nov 11 2013 One fast solution is set image property for image1 and set backgroundimage property to imag2 the only inconvenience is that you have the two images inside the picture box but you can change background properties to tile stretched etc

Make sure that bgcolor be transparent Don t use opacity for this set the background to an RGBA value instead to only make the background semi transparent. In your case it would be like this.
